

Green Clean

The Professional Wheelie Bin Washers

Method Statement

Green Clean only use bespoke bin washing machines built by themselves to comply with all DEFRA and Environment Agency recommendations/guidelines we are also Water Regulations Advisory Scheme, Safecontractor Health & Safety Assessment Scheme and CE approved.

These bin cleaning machines use oil hydraulics to lift the bins to the water catcher/initial filter and have both hand lance and on board spray heads to wash the bins inside and out whilst collecting all of the water used within a water catcher on the rear of the bin cleaning equipment, avoiding polluted water reaching the storm drain system.

The water is then recycled as required by the Environment Agency and filtered to 300 microns.

A “Citrus Cleaner” that is eco-friendly and Environment Agency approved is used to assist the water cleansing and the washing of the bins.

Surplus water left in the bin is then mopped out to ensure the bin is dry inside and an “air freshener” is applied to give the bin a pleasant fragrance.

All processes comply with both Environment Agency and DEFRA guidelines and all Green Clean operators have public liability insurance, a waste carrier’s license and legal consents to dispose of the waste water at the day’s end. We are also members of **The National Association of Wheeled Bin Washers**.
